

RADAR TARGET SIMULATOR - FIXED DISTANCE

AMG043-006B - Radar target simulator

- Designed to simulate speed and distance under safe conditions
- Independent from all radar modulations (pulse, CW, FSK, FMCW)
- Accurate and high performing

DESCRIPTION

The RTS AMG043-006B creates a calibrated echo at a given distance for a programmable rate. The response is continuous or pulsed at a rate of 3 s ON and 3 s OFF.

The 12 V powered version can be supplied as a stand-alone unit in a carrying case for installation checks.

USE

APPLICATIONS

- Metrological control and approval of 24 GHz radars
- Calibrated SER simulation
- Test bench for K-band radars (24 GHz)
- Verification of speed measurement equipment (except multi-target radars)
- Verification of radar in production and on site

ADDITIONAL INFORMATION

FEATURES

- Simulation of a distance in the range of 2.5 m to 1000 m with an accuracy of 0.5m
 - Programmable direction of travel
 - Continuous or ON/OFF simulation
 - Speed in m/s, km/h and mph
 - Speed from ± 800 Km/h
 - SER from -20 dBm² to +40 dBm² (to be defined)
- 12 V, 12 W
